

Research

Interests

Huma-Centered AI

Education

KAIST (Korea Advanced Institute of Science and Technology)

M.S. in Electrical Engineering

Daejeon, Korea

Sep 2026 - Present

Kyung Hee University

B.S. in Computer Science (GPA: 4.23/4.5, Major: 4.31/4.5)

Seoul, Korea

Mar 2020 - Aug 2026

Experience

User eXperience Computing Lab, Kyung Hee University

Seoul, Korea

Undergraduate Researcher, Advised by Prof. Sangkeun Park

Sep 2024 - Present

- Research on AI-driven intervention system to detect and filter upward-comparison-inducing content on social media.
 - Utilized OpenAI API via prompt engineering to extract semantic contexts from posts.
 - Implemented a personalized classification model within a Chrome extension to address individual differences in comparison triggers.
 - Conducted user study, statistically verifying that filtered content induces 2x higher comparison intensity.
- Research on a digital self-control tool leveraging JND-based video playback speed modulation.

Korea Electronics Technology Institute (KETI)

Seongnam, Korea

Research Intern

Sep 2025 - Dec 2025

- Developed an in-vehicle monitoring app for zonal architecture with Kotlin and Flutter, addressing the difficulty of identifying network faults through text logs alone.
- Implemented a 3D Digital Twin visualization using Three.js to map complex fault data onto the vehicle's spatial topology, reducing engineers' cognitive load.

M5ers

San Jose, CA

Intern

Nov 2024 - Feb 2025

- As one of two software engineers on the team at a pre-launch startup, designed and developed an internal management web app for ASIC-based Bitcoin mining rigs using React and Node.js.
- Authored technical documents, and designed Figma interfaces for complex rig register operations.

Publications

Development of a Personalized Content Filtering System for Upward-Comparison-Inducing Content

Jeongwon Kim, Eunnho Kim, and Sangkeun Park

Poster Session, 2025 Korea Computer Congress (KCC2025)

Awards & Honors

Academic Excellence Scholarship (4 Consecutive Semesters)

Kyung Hee University
2023 - 2025

Special Award, K-League x University of Seoul Open AI Competition

Korea Professional Football League

Developed a fine-tuned AI agent capable of emotional interaction and real-time match context understanding. Jan 2026

Special Award, Open-Source Contribution Academy

Ministry of Science and ICT

Recognized for contributions to Pyodide (a Python distribution for the browser with 14k+ GitHub Stars). Nov 2025

2nd Prize, Artistic Software Contest (Hackathon)

Kyung Hee University

Developed 'Palmful', an AI-based floral designing and archiving web service (Total 22 teams participated). Oct 2025

Personal Projects

Tiki-Taka: Real Time Data-Driven AI Companion for K-League

Dec 2025 - Jan 2026

- Developed an AI agent capable of emotional interaction and real-time football match context awareness, addressing fans' needs for an engaging co-viewing partner over a generic commentator.
- Defined an 'Enthusiastic Fan' persona via interviews and fine-tuned LLM with self-constructed dataset of 20k entries.
- Integrated an pipeline that calculates scoring probabilities from live action data using an ML model, feeding these results as prompts into LLM to enable context-aware, real-time reactions.

Riido (Industry-Academic Collaboration with SWYG) [project page](#)

Sep 2025 - Nov 2025

- Led a 5-person team in optimizing the user flow of AI-based project management tool 'Riido AI', identifying key pain points through usability testing.
- Redesigned user flow prioritizing agency and visibility, and validated the prototype via A/B testing, demonstrating improved usability.

Palmful [project page](#)

May 2025 - Oct 2025

- Designed and developed a web app featuring AI-based bouquet design generation and archiving, to address the issue of short lifespan and uniformity of floral gifts identified through user research.
- Constructed a rule-based filtering system integrating florist domain knowledge to enhance AI reliability, enabling personalized bouquet designs that reflect user emotions and contexts.

Filca [project page](#)

Apr 2025 - Aug 2025

- Developed a Chrome extension with 300+ Daily Active Users (DAU), that filters video feeds according to user-selected categories, addressing the issue of recommendation algorithms diverting users from their initial goals.
- Conducted a quantitative analysis of user behavior logs (N=46) to evaluate the system's effectiveness and derive design implications for recommendation systems.

Extracurricular Activity

Club Member @ KHUX, Kyung Hee Univ. UX/HCI Club

Mar 2025 - Dec 2025

Led team to conduct user research and product design for industry-academic collaborations with SWYG and Kakao.

Vice President @ Alttium, Kyung Hee Univ. Band Club

Jan 2024 - Dec 2024

Led an 8-person team to manage a club with 50+ members, increasing club membership by 125%.

Teaching
Experience

Teaching Assistant for SWCON104 Web and Python Programming course

2024 Spring

Authored solutions for assignment/exam and delivered presentations to support students' understanding of Python.

Skills

Programming	Python, JavaScript, TypeScript, Dart, C++ , SQL
Software & Frameworks	React, Flutter, Firebase, FastAPI, Docker, AWS, Git, Pandas, Scikit-learn, LLM
Design & Research	Figma, Qualitative & Quantitative Analysis
Languages	Korean (Native), English (Fluent, 3 years residence in Australia, TOEIC: 980, TEPS: 558)
